How to make purple colour by mixing two colours

Most of us know what colors make purple paint but mixing red and blue doesn't always give us the desired result. Getting a bright, vibrant purple can be a little complicated. Purple is a color that is frequently on my painting palette. I love the color and all of its various tints and shades, but it is also a very useful paint color even if you are not a fan of purple. Purple can be used to darken blues and reds without using black. It also lends a depth and richness to black paint, which tends to be flat and dull on its own. A tiny bit of purple can also be used to mute or tone down yellows and oranges when you find they are too bright. In my opinion, Dioxazine Purple is a must have in your paint box. But what if Dioxazine Purple is not the right purple for your painting? How do you mix various tints and shades of purple if you don't have Dioxazine? And why does your mix of blue and red give you a dull muddy color instead of the vibrant purple you want? All of these questions are answered below and I give you a whole range of purples to use. I work mostly in acrylics, but these mixes will work for any medium. At the end of this post I have also included a printable color mixing chart for purples. This post may contain affiliate links. If you click a link and buy, I may receive a small commission. Please see my full privacy policy for details. Why Red and Blue Don't Always Make Purple We all learned at a young age that blue and red make purple. Primary Blue and Primary Red mixed in equal amounts will make purple. Primary Red plus Primary Blue make Purple But what about all of those other blues and reds in your paint box that don't quite give you the purple you imagined when mixed together? The answer is color bias. Color bias means that some colors also have hints of other colors in them. So, for example, some blues have hints of yellow. Some reds have hints of blue and some blues have hints of yellow. Some reds have hints of blue and some blues have hints of yellow. Primary color theory tells us that if we mix the three primary colors together, red, blue and yellow, we get brown. If you mix a blue with a red that has hints of yellow you are actually mixing all three primary colors, so you get a muddy, brownish purple. Blue + Red + Yellow = Brown Blue plus Red plus Yellow equals Brown Here is a list of the more common blues and reds and their color bias. Color Bias Chart So, your tubes of blues and reds must have no yellow (or green since blue + yellow = green) in order to make a true purple. For more information on color theory, check out my post on the basics of color theory for beginners. How to Check for Color Bias You can check the color bias of your paint by mixing them with a little white. Red paint mixed with white should turn pink. If you get a peachy color, then there is a yellow bias. Red and white mixed pink Red and white make peach Blue paint mixed with white should turn light sky blue. If you get a greenish blue or a turquoise blue, then there is a yellow bias. Ultramarine Blue and white make sky blue Cerulean Blue and white make a cool red. Ultramarine Blue (warm) and Quinacridone Magenta (cool) is my favorite mix for a bright purple. You can also use Alizarin Crimson (cool) and Ultramarine Blue or Permanent Rose (cool) and Ultramarine Blue, but the Quinacridone Magentas will give you the brightest purple. (see chart below) Mix these colors in equal parts to get the brightest purple. (colors on the computer screen are not always accurate) Ultramarine Blue plus Quinacridone Magenta Ultramarine Blue plus Permanent Rose Ultramarine Blue plus Alizarin Crimson How to Mix Dark Purple Acrylic Paint To make a dark purple you can use the same mixes as above but use more blue than red. The more blue you use, the darker your purple will be. You can also add very tiny amounts of black paint to the bright purple mixes to darken them. Black can quickly overwhelm your purple paint so start with tiny amounts of black and keep adding it until you get the color you want. Alternatively, you can start with a premixed tube of purple, such as Dioxazine Purple and add blue or black paint to it gradually until you achieve the desired result. Purple plus Black Mixing Light Purple Paint Again, take your bright purple mix and this time add a little white. The more white you add, the more pastel the color will be. You can also try adding a tiny amount of Cadmium Lemon Yellow to lighten the purple paint. This will give you a less pastel look. Make sure to use the Lemon Yellow as other yellows will give you a dull, muted greyish purple. Purple plus Lemon Yellow plus Muted Purple To get muted purples, you need to mix the complement of purple, opposite on the color wheel, which is yellow. For more information on this, see my post on complementary colors. Purple is opposite yellow on the color wheel. They are therefore complementary colors. Adding a little Cadmium Yellow, Hansa Yellow, Yellow Ochre or any yellow you have in your paint box will give you a muted shade of purple. Purple plus Cadmium Yellow Purple and Yellow Ochre Purple plus Hansa Yellow You can also add a yellow to any premixed tube of purple that you have to get a muted shade of purple. If the result is too dark you can add a little white to lighten it or more yellow depending on how deep the purple was to start with. To darken the muted purple, again add a tiny bit of black or more blue to get the darker muted shade. Purple Color Mixing Chart Click on the chart to download it and save it to your computer or print it for future reference. Purple color mixing chart You need to play around a bit with the colors you have to see what you can come up with. There are many combinations of paint colors to give you many variations of purple. Each manufacturer has a slightly different formula for their paint, so you may get slightly different results depending upon which brand you use. Making Purple "Pop" If your purple doesn't "pop" on your painting, try surrounding it with a dull color like I have done in this painting. The duller greenish-yellow makes the purple of the flower look more vibrant. Acrylic painting of a purple flower. Surrounding your purple with say a vibrant blue will make your purple seem to fade back into the picture. Contrast is the key to making your subject stand out in any painting. Points to Remember Red (with a blue bias) + Blue (with a red bias) will give you purple. Yellow (opposite on the color wheel) will tone down or grey out the purple color. Colors are influenced by what is around them. To make your purple look more intense, surround it with dull colors. I hope these tips work for you and you enjoy playing around with color mixes. Remember to save swatches of the colors you mix so you will remember how you mixed them when you need to use them. How to Mix Purple Acrylic Paints I would love to see what you have painted with your color mixes and how you used the various tints and tones of purple. Thanks for reading! Share272 Tweet Reddit Purple is associated with luxury, wealth, and power in color psychology. Furthermore, considering its history, purple is also associated with nobility and royalty. In combination with red, blue, purple indicates wisdom and knowledge, which is associated with calm and stability. The color purple is a wonderful, versatile color, long loved by royalties around the world. Learning how to mix the perfect shade of purple can also be challenging due to the variety of purple shades. It's easy to mix red and blue together to get purple, but finding the right shade of purple is not as easy. To create any shade of purple you wish, we cover all the things you need to know about what colors make purple in this article. To find out what colors make purple, keep reading. What Two Colors Make Purple Red + Blue = Purple Blue and red can be combined to make purple. Your mixture's exact shade of purple will be determined by the amount of blue and red you add to it. When more red is added to purple, it will become redder, and when more blue is added, it will become bluer. The primary colors in purple are blue and red, but several other colors can be added to create different shades. Your mixture of red and blue will be lighter if you add white, yellow, or gray. You can make your purple shade darker by adding black to your blue and red mixture. Accordingly, purple can be described as any color whose hue lies between red and blue. Combining these two colors is one way to get purple, but there is a trick to getting the perfect shade. This is where color theory comes in! When you understand the science behind making purple, you will be able to make it yourself. Shades of Purple: How to Make Them The overall color of purple will be dark when mixed with Ultramarine Blue, but a lighter shade of purple will be created if it is mixed with Cobalt Blue. Alizarin Crimson mixed with purple is also more cooler in temperatures than Cadmium Red and Blue combined. Purples may also be mixed with other types of reds besides those listed here, such as Quinacridone Red, Burnt Sienna, or Vermilion. Mixing Blue and Red in order to make the color purple, there are many different forms of blue available, such as Phthalo Blue, Cerulean Blue, and Prussian Blue. If you don't have any of these colors, you can still make the color purple. If you have blue and red, you can make purple out of them. Dark Red + Dark Blue = Dark Purple Light Red + Light Blue = Light Purple Getting right to the point: mixing red and blue will produce purple, but it depends entirely on what hues or shades of red and blue you use or how much of each you use. Shorty, knowing what color to choose is crucial to getting the right color. Dark Shades of Purple Generally, purples are already darker colors, so they are great for making dark colors. Even though the color purple is a wonderful color, there are plenty of ways to make it even darker! Combining purple with other colors that are dark in value will make it darker in the color chart below. The combination of burnt umber and purple creates a mellow dark purple tone. Additionally, burnt umber is warmer than purple, so it makes the purple appear warmer. A dark black color is created by mixing Phthalo Green with Alizarin Crimson. Mixing this purple mix with this color mixture produces a very dark purple color. One of the darkest purples you can mix with is probably this one. Provence Violet Blush or any other lighter purple can also be used to mix dark shades of purple. You will end up with a much lighter shade of purple when using Provence Violet Blush than you would with Dioxazine Purple. Despite this, it will still make a dark purple color you can see from the color chart. Muted Shades of Purple Muted colors are opposites of bright colors. In some cases, a bright shade of purple in a painting is not necessary. Muddled purple colors can also help a painting stand out. Remember, whenever you combine color with its complementary color, you can make muted colors. Observing purple on a color wheel, its complementary color is yellow, as complementary colors are opposites. Mixing purple with yellow will result in a muted shade of purple. Through the different combinations of yellow and purple, one can achieve several muted shades of purple. In order to achieve a muted shade of purple, you might use the following shades of purple and yellow: Yellow Ochre + Dioxazine Purple = Muted purple Different shades of yellow: Yellow Ochre+Cadmium Yellow Different shades of purple: Provence Violet Blush+Dioxazine Purple The color combinations above are not the only ones you can choose from. Yellow and purple are available in other shades as well. Light Shades of Purple Purple is basically a dark color, which means that when mixed with other colors, such as burnt umber, Phthalo Green, and Alizarin Crimson, it can be achieved in a variety of shades of purple. However, what about lighter purple shades? Could we get them? The answer is yes! Purple can be easily blended with a color that has a light value to make the light shades of purple. White + Dioxazine Purple = Light Purple By first adding a white color to purple, you can produce a lighter shade. For example, you can create a nice light shade of purple when mixing white with Provence Violet Blush (a shade of purple). A light purple color can also be obtained by mixing white with Dioxazine Purple. You can also create a light shade of purple by combining yellow with purple, which is another way to make it. It is possible to achieve a lighter shade of purple by mixing Cadmium Lemon Yellow with Provence Violet Blush and Dioxazine Purple. Cooler Shades of Purple You can create purples that are cool in value in addition to muted, dark, and light shades of purple. When mixing colors, it is imperative to take the value and temperature of the colors into consideration. You can make purple cooler by mixing blue with it. The color purple will become cooler if you mix Ultramarine Blue with Cobalt Blue and Dioxazine Purple with Provence Violet Blush. Combinations of colors would be: Cobalt Blue + Provence Violet Blush Cobalt Blue + Dioxazine Purple Ultramarine Blue + Provence Violet Blush Ultramarine Blue + Dioxazine Purple Warm Shades of Purple Having discussed the above, it is now apparent that you can get a cooler purple shade when blue is combined with purple. In order to achieve a warm purple color, what colors can be used? Warmer purple color can be achieved when mixing the red and purple colors. Warm purple color is usually created by using two shades of red. Alizarin Crimson and Cadmium Red are examples. They are both shades of red containing a purple component. Combinations of colors would be: Cadmium Red + Dioxazine Purple Cadmium Red + Provence Violet Blush Alizarin Crimson + Dioxazine Purple Alizarin Crimson + Provence Violet Blush A warm shade of purple can be made by combining all these colors. Purple Color Mixing Chart To figure out what can be done with the colors you already have, you need to play around with them. You can mix different paint colors to get different shades of purple. However, what about lighter purple shades? Could we get them? The answer is yes! Purple can be easily blended with a color that has a light value to make the light shades of purple. White + Dioxazine Purple = Light Purple By first adding a white color to purple, you can produce a lighter shade. For example, you can create a nice light shade of purple when mixing white with Provence Violet Blush (a shade of purple).
